Dear Hiring Manager,

I am currently a student in Mathematical Probability and Statistics Program, with a special focus on Quantitative Finance and Risk Management at the University of Michigan.

I'm applying for an intern position at your company. I was motivated by those opportunities available to students with my background which makes it possible to use my quantitative skill in interesting ways and at the same time generate real profit.

My skill set and interest are predominantly focused on math and programming. With an undergraduate degree focusing on applied mathematics and computational method, I pick up financial concept in my current master's curriculum which also gives me intense training in applying probability and statistic tools to solve problems in the finance and dealing with financial data.

I am a eager learner, always take an interest in new things and new ideas. I am enthusiastic and focus at what I do, and I am also easy going and open-minded.

I would appreciate a job interview at your earliest convenient and please find my resume attached.

Sincerely,

Dongxu Li
